Outline

- Introduction Section
 - Recap from Last Class
- Main Section
 - Sharing Resources – Importance and What to Watch Out For
 - GitHub
 - GitHub pages
- Conclusion Section
 - Ask Me Anything

Introduction Section

Recap from Last Lecture - Class 2

We talked about

- Understanding an Organization
- Understanding Jobs and Career Success
 - Research Career
 - Money v/s Success
- From Course to Careers
- Course Advising

Activity Given – Writing Mission Statement

- Objective: identifying your **personal** mission for a career and success
- Guideline:
 - Think of short (1-3 years), medium (4-7 years) and long-term (8 -) goals
 - While career is the focus, feel free to include personal goals as well
 - Define success criteria for all goals
 - Try to structure how short term (e.g., undergrad program) may help meet **medium-term goals**
 - Try to structure how short and medium may help meet **long-term goals**
- Try to identify organizations and job roles of interest
- Strategize how your major and courses may help

What is Professionalism ?

- Definitions
 - *is a set of standards that an individual is expected to adhere to in a workplace*, usually to appear serious, uniform, or respectful. (<https://en.wikipedia.org/wiki/Professionalism>)
 - the skill, good judgment, and polite behavior that is expected from a person who is trained to do a job well (<https://www.merriam-webster.com/dictionary/professionalism>)
- Contrast to other behaviors
 - non-professional
 - personal behavior
 - ...

What is Professionalism for IT?

- Technical characteristics
 - Knowledgeable
 - Keep things organized
 - Git/ GitHub
- Personal characteristics
 - Responsible
 - Respectful
 - ...

Main Section

Sharing of Resources - Importance

- Growing the ecosystem
 - Collaboration: doing more and faster together
 - Learning: see and emulate from others
- Raising one's own professional stature
 - More the users, more the value of resource (asset) provided

Sharing of Resources – What to Watch Out For

- Intellectual property (IP)
- Privacy
- Unintended commitments

History – Git, GitHub and Significance

- Git
 - Perform version control for files using a (remote, local) server
 - Created by Linus Torvalds (creator of Linux), 2005 (Source: <https://en.wikipedia.org/wiki/Git>)
- GitHub
 - Running Git, remote server maintained by a organization (GitHub). Created in 2008.
 - Originally open-source and non-profit, sold in 2018 to Microsoft
- Significance
 - GitHub is the world's largest [source code](https://en.wikipedia.org/wiki/GitHub) host as of June 2023. Over five billion developer contributions were made to more than 500 million open source projects in 2024.(Source: <https://en.wikipedia.org/wiki/GitHub>)
 - Works with **any type of files**
- We will use Git and GitHub terms interchangeably for convenience

Git Concepts

- File – anything worth storing
 - Repository – a place with files and folders
- Versions – a file state at a given time
- Commit - taking a snapshot of a repo; push, pull, status
- Branch

Free book for further reading:

- **Pro Git**, Scott Chacon and Ben Straub (2014), <https://git-scm.com/book/en/v2>

Git Resources

- Cheat sheet:
<https://git-scm.com/cheat-sheet>
- Videos:
<https://git-scm.com/videos>

The screenshot shows the Git Cheat Sheet page from the official Git website. The page has a light beige background with a sidebar on the left and a main content area on the right. The sidebar contains a 'Table of Contents' with a list of topics, and the main area is titled 'Git Cheat Sheet' and is organized into sections with corresponding Git commands.

Git Cheat Sheet

Getting Started

- Start a new repo:
`git init`
- Clone an existing repo:
`git clone <url>`

Prepare to Commit

- Add untracked file or unstaged changes:
`git add <file>`
- Add all untracked files and unstaged changes:
`git add .`
- Choose which parts of a file to stage:
`git add -p`
- Delete file:
`git rm <file>`
- Unstage one file:
`git reset <file>`
- Move file:
`git mv <old> <new>`
- Tell Git to forget about a file without deleting it:
`git rm --cached <file>`
- Unstage everything:
`git reset`

Table of Contents

- Getting Started
- Prepare to Commit
- Make Commits
- Move Between Branches
- Diff Staged/Unstaged Changes
- Diff Commits
- Ways to refer to a commit
- Discard Your Changes
- Edit History
- Code Archaeology
- Combine Diverged Branches
- Restore an Old File
- Add a Remote
- Push Your Changes
- Pull Changes
- Configure Git
- Important Files

GitHub Concepts

- Organizations
- Projects
- Team

GitHub Concepts

Ways to operate

- Command-line
- GitHub tool
- Using browser

The screenshot shows the GitHub web interface for the repository `github.com/AI4S-AI-teaching-resources/CSCE-190-github-quickstart`. The page is titled "Quick setup — if you've done this kind of thing before". It provides two main options for cloning the repository: "Set up in Desktop" and "HTTPS" (selected). The HTTPS URL is `https://github.com/AI4S-AI-teaching-resources/CSCE-190-github-quickstart.git`. Below this, it says "Get started by [creating a new file](#) or [uploading an existing file](#). We recommend every repository include a [README](#), [LICENSE](#), and [.gitignore](#)."

Below the cloning instructions, there are two sections for command-line setup:

...or create a new repository on the command line

```
echo "# CSCE-190-github-quickstart" >> README.md
git init
git add README.md
git commit -m "first commit"
git branch -M main
git remote add origin https://github.com/AI4S-AI-teaching-resources/CSCE-190-github-quickstart.git
git push -u origin main
```

...or push an existing repository from the command line

```
git remote add origin https://github.com/AI4S-AI-teaching-resources/CSCE-190-github-quickstart.git
git branch -M main
git push -u origin main
```

💡 **ProTip!** Use the URL for this page when adding GitHub as a remote.

GitHub Usages

- Sharing code (GitHub)
 - Variants: Sharing code and taking actions – e.g., building code-bases periodically
- Creating and hosting web pages (GitHub pages)

GitHub – Managing Code

- Process for making change
 - Make local changes
 - **Add** – add changes to (local) repo
 - **Commit** – tell git that you intend to make changes final
 - **Push** – tell git to make changes to remote server

Source: **Pro Git**, Scott Chacon and Ben Straub (2014),
<https://git-scm.com/book/en/v2>

Demo – Git, GitHub

- Creating an organization
- Creating a repo
 - Adding license
 - Adding .gitignore
 - Cloning a repo
- Creating file
 - Committing changes
 - Pulling a file

Activity 3-1 – GitHub

- Objective: learn your way through Git and Github
- Tasks
 - Create an account on GitHub
 - Access GitHub repo created in class:
 - [https://github.com/AI4S-AI-teaching-resources//fall2026-class190-section\[X \]-demo1](https://github.com/AI4S-AI-teaching-resources//fall2026-class190-section[X]-demo1) where X is your section.
Example
<https://github.com/AI4S-AI-teaching-resources/fall2026-class190-section4-demo1>
 - See contents
 - Now create your own repo under your account
 - Call it CSCE-190-[yourname], keep it private
 - Create a sub-folder called **assignments**
 - Put your mission statement (from Class 2) under **assignments**.

GitHub Pages

GitHub Pages

- Using GitHub to host website
 - If you have an account on GitHub, you can create the associate website
 - Uses Git and well-defined file layout to fetch and manage website pages
- Uses HTML and css
- For more, see external presentations (published with permission)
 - GitHub pages – TyB presentation - [https://github.com/biplav-s/course-cmw-f26/blob/main/resources/class3-class4-ExternalSlides/Week%2003-TA-TyB\(GitNGitHub\).pdf](https://github.com/biplav-s/course-cmw-f26/blob/main/resources/class3-class4-ExternalSlides/Week%2003-TA-TyB(GitNGitHub).pdf)
 - GitHub pages / HTML – RobertB presentation - [https://github.com/biplav-s/course-cmw-f26/blob/main/resources/class3-class4-ExternalSlides/Week%2003-RobertB\(GitHubPagesHTML\).pdf](https://github.com/biplav-s/course-cmw-f26/blob/main/resources/class3-class4-ExternalSlides/Week%2003-RobertB(GitHubPagesHTML).pdf)

Document using Markdown

- Background
 - A simple markup language for the web
- Resources
 - Basics: <https://www.markdownguide.org/basic-syntax/>
 - Cheat sheet: <https://www.markdownguide.org/cheat-sheet/>

Concluding Section

Conclusion

We talked about

- Sharing Resources – Importance and What to Watch Out For
- GitHub
- GitHub pages
- Touched upon HTML and Markdown

Week	Content	Assignment
1	Intro, syllabus, university resources	Slack account
2	CSE majors, career paths, research areas	Write a mission statement
3	Github (account and basics)	Github account, repo
4	VS Code, HTML basics	None
5	More HTML, CSS	Update Github with CSS
6	Brainstorming, problem statement	Problem statement
7	Computing – (Software) Dev. Life Cycle	Draft Requirement, Specification
8	Computing – Testing a System	Test Plan
9	Building a resume, LinkedIn	Draft resume in PDF
10	Review resumes	Review resumes, update Github
11	Convert resume to HTML	Begin conversion, update Github
12	Github code repos	Add repos to portfolio, add SDLC outcomes
13	CSE research areas	(Finalize website)
N/A	Last day of classes: 4 Dec, 2026	All extensions end
